EMPLOYEE ATTRITION BOOKLET

We are losing 1 in 6 employees.

The problem, where it hides, and the plan to fix it.

The problem in one paragraph

237 of 1,470 employees left the company (16.1%). The exits are not random: they pile up in a few groups - people who work overtime, entry-level and low-paid staff, sales representatives, and employees in their first year. Fixing those groups is cheaper and faster than a company-wide program.

Data: 1,470 employees, 35 columns (44 after cleaning). No missing values or duplicates; 3 constant columns removed.

3x

higher attrition for overtime staff

30.5% vs 10.4% without overtime

39.8%

of Sales Representatives left

vs 16.1% company average

52.6%

of entry-level overtime staff left

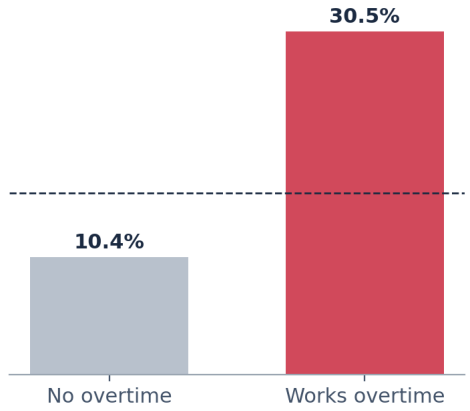

156 employees, 82 exits

Where the problem is

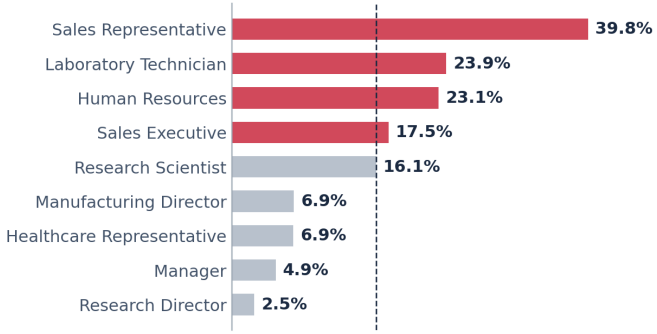

Attrition rate by group - red bars are well above the company average; the dashed line marks the average (16.1%)

- **Overtime**
  30.5% leave when they work overtime vs 10.4% when they do not - about 3 times higher.
- **Sales Representatives**
  39.8% attrition, more than double the company average.
- **Low pay**
  28.6% leave below 3K monthly income vs 5.6% above 12K.
- **First year**
  34.9% of people leave within their first year at the company.

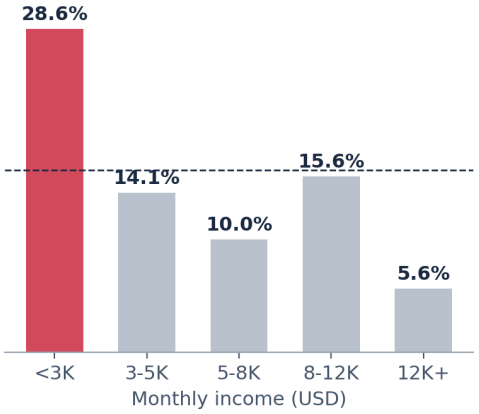

Overtime

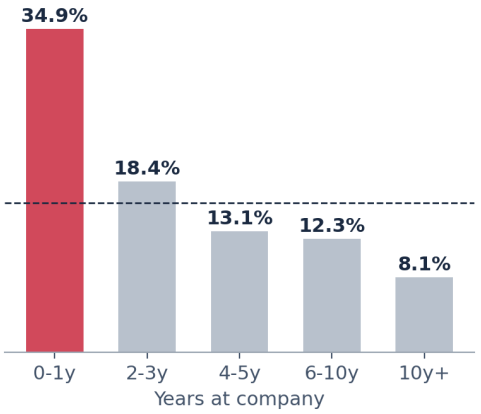

Job role

Monthly income

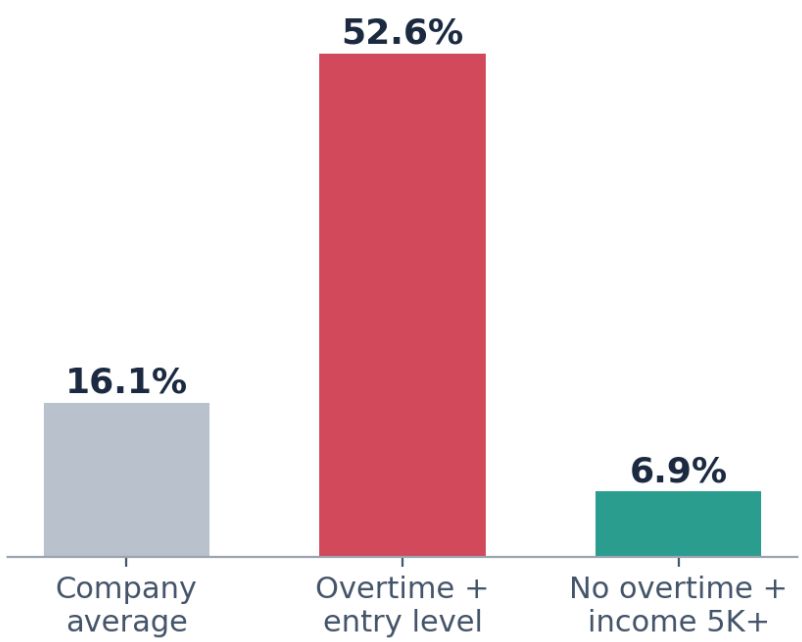

Tenure

Why it happens: risk stacks up

Single factors matter, but combined they create a hot segment where half of the people leave

Entry-level overtime staff vs the rest

1 Workload

Overtime staff leave at 30.5%. Among Level 1 employees on overtime it reaches 52.6%.

2 Pay and level

Level 1 jobs lose 26.3% vs 9.7% at Level 2. Staff under 3K a month lose 28.6%.

3 No stake in the company

No stock options: 24.4% leave. With Level 1 options: 9.4%.

4 Travel and early career

Frequent travelers lose 24.9% (no travel: 8.0%). Single employees lose 25.5% (married: 12.5%).

These are patterns in the data (association), not proof of cause. Exit interviews should confirm them.

How we solve it

Target the hot segment first, then keep watching - four actions and one early-warning list

1 Control overtime

Cap overtime hours, rotate it fairly and pay or time-off compensate it. Start with the 416 employees who work overtime.

Month 1

2 Fix entry-level pay

Run a market pay check for Level 1 and under-3K roles; close the gap for high performers first.

Months 2-3

3 First-year program

90-day onboarding, a buddy or mentor, and 30/60/90-day check-ins for every new hire.

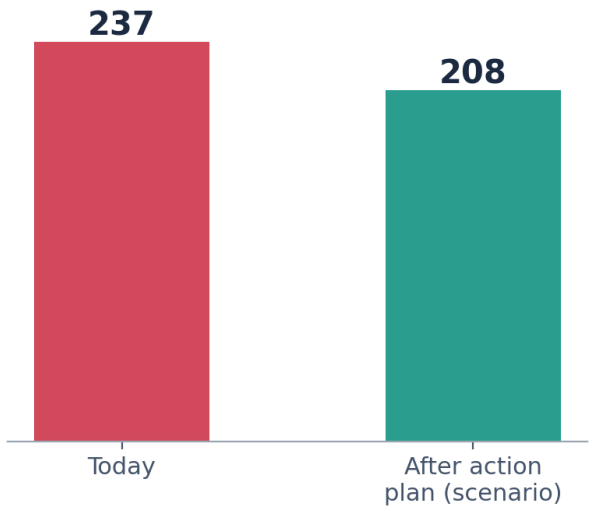

Months 1-3

4 Build a stake

Extend stock options to Levels 1-2 and reduce travel load for Sales Representatives.

Months 3-6

Expected result (scenario)

Early-warning list and KPIs

Flag every employee who works overtime AND earns under 5K a month: 205 people, 88 exits so far (42.9%). Review them monthly with their managers.

Scenario: if the plan cuts attrition in this group by one third, about 29 fewer people leave and company attrition falls from 16.1% to about 14.1%. This is an estimate to track, not a guarantee.

KPIs: monthly attrition rate, first-year attrition, overtime hours per employee, attrition in the flagged group.
